Profile

Front-end Developer with more than four years of experience building SaaS products and transactional platforms. Experience with React, TypeScript, and Next.js, including component architecture, design systems, Cypress end-to-end testing, and front-end performance optimization.

Professional experience

Happ **Apr. 2025 – Oct. 2026**

Front-end Developer

- Built the front end for 6 flows in a new B2B preventive-health SaaS product (approximately 20–25 views), owning requirements end to end and contributing to file and component architecture.
- Customized components to the company design system with Flowbite, Tailwind, and Figma; prepared the internationalization foundation for English, pending completion of product copy.
- Automated Cypress end-to-end tests for all application flows and applied lazy loading to the home and feature pages to improve initial load performance and stability.

Technologies: React, TypeScript, Zod, Axios, Redux, AWS Amplify, Flowbite, Tailwind, Sentry, i18n, React Hook Form, and date-fns.

icar **April 2023 – April 2025**

Front-end Developer

- Took primary responsibility for the front end of a digital vehicle-transfer platform, independently resolving the tickets prioritized for each sprint.
- Implemented and maintained 4 modular flows with configurable variants (approximately 40–50 views), including components customized to the company design system.
- Refactored an existing application and contributed to front-end decisions for new features, with a focus on code readability, maintainability, initial load performance, and stability.

Technologies: Next.js, GraphQL, Axios, Ant Design, Vercel, and JWT.

Jumpitt **March 2022 – April 2023**

Front-end Developer

- Integrated WebSockets for real-time messaging and file sharing; deployed the front end on Amazon EC2 and integrated OAuth sign-in.
- Contributed to connecting the front end to a real-time chat service, participated in front-end decisions, and demonstrated the application to clients.

Technologies: React, Redux, Redux-Saga, Webpack, Axios, Ant Design, ExpressJS, Prisma, JWT, and Amazon EC2.

Jumpitt **December 2021 – February 2022**

Full-stack Developer Intern

- Integrated the Meta API with third-party APIs to send messages and developed the front end with Clean Architecture.
- Participated in back-end decisions, microservices architecture, and product-scope definition.

Technologies: Node.js and ExpressJS.

Education

Pontificia Universidad Católica de Valparaíso March 2019 – December 2022
Ingeniería de Ejecución en Informática (degree title in Spanish)

Additional technologies

JavaScript, Python, Astro, Socket.IO, WebSocket, PostgreSQL, MongoDB, Git, Docker, and Jira.

Certification and languages

Languages: Spanish (native); English — C2 Proficient, EF SET 74/100 (2024).
