Perfil Personal

Computer engineer with a passion for software development. Currently specialising as a front-end developer, aiming to expand my knowledge towards full-stack development. I am passionate about new technologies and learning more about them, always looking for ways to improve, find new challenges and learn.

Work experience

Happ **April 2025 - Present :** *Frontend Developer*

- Delivered new features for an existing product, including code refactoring to improve readability, maintainability, and overall code quality.
- Led the frontend development of a new product, collaborating on requirements analysis and defining a scalable architecture for component and file structure.
- Implemented internationalization (i18n) to ensure the application is fully prepared for future multi-language support.
- Established a design system using Flowbite, standardizing UI components and ensuring consistency with designs provided in Figma.
- **Technical skills**: React, Typescript, Zod, Axios, Redux, AWS Amplify, Flowbite, Tailwind, Sentry, i18n, React Hook Form, Datefns

i-Car **April 2023 - April 2025 :** *Frontend Developer*

- Actively participate in the refactoring of the application, taking good practices and making the code cleaner and more readable.
- Be actively involved in front-end decision making for new application functionalities and how to best address them.
- I was actively involved in various company projects.
- I easily adapted to the company's working methodologies, including good practices.
- I was actively involved in decision making to better address the problems that arose in order to have a better solution.
- **Technical skills**: NextJS, GraphQL, Axios, AntDesign, Vercel, JWT

Jumpitt **March 2022 - April 2023 :** *Frontend Developer*

- I developed the integration of Websockets for sending messages/files in real time.
- I developed the front-end build on Amazon EC2.
- I developed the OAuth integration for the application login.
- Be actively involved in front-end decision making.
- I was present and also in contact with customers, giving demos of the application and explaining how it works.
- **Technical skills**: ReactJS, Redux, Redux-Saga, Webpack, Axios, AntDesign, ExpressJS, Prisma, JWT, Amazon EC2

Jumpitt **December 2021 - February 2022 :** *Fullstack Developer Intern*

- Developed Meta API integration for sending messages with third-party APIs.
- I developed the front-end survey with Clean architecture.
- I was actively involved in the back-end decision making and its microservices architecture.
- Actively in defining the product and its scope over time.
- **Technical skills**: NodeJS, ExpressJS

Education

Pontificia Universidad Católica de Valparaiso **March 2019 - December 2022**
Computer Science

Skills

- **Programming Languages**: Javascript, Python
- **Frameworks / Libraries**: Nextjs, Astro, AntDesign, GraphQL, Axios, React, Redux, Redux-Saga, Prisma, Express, SocketIO (Websocket)
- **Databases**: Postgresql, MongoDB
- **Tools**: Git, Docker, Jira.
- **Soft Skills**: Teamwork, Adaptability, Communication

Certifications

- EF SET English Certificate 74/100 (C2 Proficient)

Languages

- Spanish (Naternal language)
- English Intermediate
